Star Column

directions:

Air-fill one metallic red MagicArch™ balloon using the low speed setting on the Mini Cool Aire™ Dual Pro™ inflator. Air-fill two red 11" latex balloons to 11" and tie the necks together to form a duplet. Air-fill another identical duplet and twist the two sets together to form a four-balloon cluster. Repeat steps to make two 5" yellow clusters. Tie an uninflated 260 balloon to a Heavy Weights™ balloon weight. Run the uninflated balloon up through the hole in the MagicArch™. Lay the red 11" cluster on top of the MagicArch™ and wrap the uninflated 260 around to secure. Lay the yellow 5" cluster on top and secure with the 260.

Air-fill the Rocket Balloon. Apply two Klik-Klik™ adhesive strips facing each other to the bottom of the Rocket Balloon. To secure, tie an uninflated 260 balloon into the holes in the adhesive strip. Wrap the uninflated 260 around the clusters and through the hole in the MagicArch™ and tie into the balloon weight.

Air-fill and heat seal twelve 4" stars.

Helium inflate the Bubbles™ balloon until wrinkle free. Tie an uninflated 260 balloon to the stem. Helium inflate the other MagicArch™ balloon and feed the stem of the Bubbles™ balloon through the hole. Helium inflate four red 11" latex and make a four-balloon cluster. Wrap the stem of the uninflated 260 around the cluster to secure. Wrap the air-filled yellow cluster directly around the point of the Rocket Balloon and lock into place. Lock two red balloons on the cluster directly above the yellow cluster. This will secure the top portion of the column into place. Use the uninflated 260 to tie and secure the entire top cluster to the Rocket Balloon column.

Tape the tails of the 4" star balloons back onto themselves. Apply dashes of the glue tape to the back of the 4" stars. Secure directly to the Rocket Balloon column.
