Glue Pillows

directions:

Air-fill the silver Cubez™ balloon on the low-pressure setting with the Mini Cool Aire® Dual Pro™ inflator. Tape the balloon stem back onto itself. This will be the bottom of the Christmas present.

Using the #40 sheer silver ribbon, wrap the balloon. Start at the top of the balloon, wrap the ribbon around, twist at the bottom of the balloon, pull back to the top of the balloon, and tie. Leave the tails of the ribbon intact to secure the bow. Cut the #40 silver mesh ribbon into the following lengths: 19", 20", and 21". Pull the mesh apart. Lay the strips on top of each other and tie with a small piece of curling ribbon. Tie this to the top of the Christmas present using the ribbon tails. Make another bow using the #40 sheer ribbon and tie with a small piece of curling ribbon. Tie this into the ribbons on the top of the present. Cut another yard of #9 sheer ribbon into 6–8" pieces. Glue these pieces into the bottom present.

Tape a Heavy Weights™ balloon weight to the bottom of the present. It may be necessary to use three weights to add balance.
