Monofilament
Rigging Line

equipment:

829
Twist-N-Flate™
Inflator

BR74HG
Dual Foil + Latex
Regulator

directions:

Place two adhesive grip tabs on the top of the frame, with one on each side of the frame. Air-fill a 160Q latex balloon using the Twist-N-Flate™. Curl the balloon by wrapping it around two of your fingers and inflating. Leave two inches uninflated. Tie the uninflated end of the balloon directly to the adhesive grip tabs.

Helium inflate the foil trout-shaped balloon until full. Using the correct tip on the regulator will ensure your balloon will not be damaged. Tie the knot end of the curled 160Q balloon to the stem of the foil balloon. Pinch twist the 160Q. To insure your foil balloon does not escape should your 160Q pop, run a small piece of monofilament line from the foil balloon to the adhesive grip tab.

Cut the uninflated 160Q balloons into small pieces. Gather in the middle with a section of balloon to make the fishing lure. Tie it to the adhesive grip tab.
