Monkey Around Arch

directions:

To make the ice cream cone bases, make six sets of four-balloon clusters. Use the following settings on the precision air machine for each set: .2, .3, .4, .6, .9, and 1.2. To make a cluster, air-fill two 11" goldenrod Qualatex® balloons and tie the stems together to form a duplet. Air-fill an identical duplet and twist the two duplets together to form the cluster.

To stabilize each ice cream cone base, tie an uninflated 260 Qualatex® balloon to a Heavy Weight™ balloon weight. Lay the smallest cluster flat against the weight, and wrap the 260 balloon around the center of the cluster. Do this with each cluster, working your way from the smallest up to the largest cluster. Wrap the 260 balloon around the clusters several times to lock into place.

Air-fill two 16" rose Qualatex® balloons to desired size. Tie an uninflated 260 balloon around the stem and attach one to the top of each base. To make candy sprinkles, cut small pieces of uninflated 160 balloons. Dip each piece into the OASIS® glue pan. Using just a bit of glue, adhere the pieces to the 16" balloons. Under-inflate a 6" red Qualatex® balloon with air. Push all the air into the tip of the balloon and tie. Snip off all the excess balloon. Use Clik-Clik™ balloon bond adhesive tape to put a cherry on top. Do this for both ice cream cone columns.

Helium inflate all the foil balloons. Tape the stems of the balloons directly to the monofilament line in the ordered picture below. Attach each end of the monofilament line to its own Heavy Weights™ balloon weight. Run the weights through the center of the ice cream cone columns to secure into place.
