 Inflator

BR74HG
 Dual Foil +
 Latex Regulator

Tipsy Baby Column

directions:

Helium inflate three 15" Cubez™ balloons and one 33" butterfly foil using the foil tip on your regulator. Tie one Cubez™ stem with an uninflated 260Q. Tie the other foil balloons with half of a 260Q. Apply Clik-Clik™ adhesive strips facing each other to the top of the Cubez™ balloons in random positions (see photo).

Air-fill two 5" polka dot Qualatex® balloons to 4" and tie the necks together to form a duplet. Air-fill another identical duplet and twist the two sets together to form a four-balloon cluster. Make four polka dot balloon clusters. Inflate four yellow 11" Qualatex® balloon to 9" and make a four-balloon cluster. Inflate two yellow 5" Qualatex® balloons very small and tie. Break the balloon in half and twist together to make a very small duplet.

To assemble, tie a Heavy Weights™ balloon weight to one un-cut, un-inflated 260Q attached to a Cubez™ balloon. Lay the 11" cluster flat. Lay a polka dot cluster on top. Wrap the 260Q around both of these clusters, positioning the weight at the bottom. Tie the half 260Q attached to the Cubez™ balloons to the adhesive strips on the previous balloons. Top the column with the 33" butterfly foil. Wrap the 5" clusters around each connection point to hide the mechanics of the column. Wrap the small cluster around the lowest Cubez™ balloon.
