directions:

Helium inflate the Orbz™ balloon using the latex tip on the regulator until wrinkle-free or use the Inflation Gauge provided in the package. Tie ribbon to the balloon stem, weight it, and set aside.

Air-fill the Cubez™ balloon using the low-pressure setting on the Mini Cool Aire® Dual Pro inflator. Tie the balloon stem with an uninflated 260Q. Apply two Clik-Clik™ adhesive strips facing each other to the top of the Cubez™ balloon. On high speed, inflate an 11" and two 5" balloon clusters. Set aside.

Air-fill a 260Q with the 8360Z air inflator, leaving about ½" uninflated. Tie the neck of the balloon to the uninflated portion, making a loop. Make four loops. Tie the loops together at the necks making two duplets. Twist together to make a cluster. Air-fill four orange 260Q balloons to about 12". To make this quickly, cut the balloon in half before inflating, or inflate the balloon full, twist in half, and let the air out of the bottom portion.

To assemble, tie a Heavy Weights™ balloon weight to the uninflated 260Q attached to the Cubez™ balloon. Lay the 11" cluster flat. Lay the orange cluster on top. Wrap the uninflated 260Q around both of the clusters, positioning the weight at the bottom. Pull each loop of the orange 260Qs around the corner of the Cubez™ balloon. To secure, use OASIS® UGlu™ adhesive dashes to adhere these to the Cubez™ balloon. Tie the ribbon attached to the Orbz™ balloon to the adhesive strips on top of the Cubez™ balloon. Wrap the 5" clusters around the neck of the Orbz™ balloon and around the adhesive strips on the Cubez™ balloon. Wrap the short 260Q cluster into the 5" balloons as shown.
