OASIS® Glue Pillows

instructions:

Air-fill the Bubbles™ balloon using the Mini Cool Aire® Dual Pro™ inflator on high speed. Use the largest tip on the inflator. Cut the ribbon on the balloon to 12". Slip the balloon stem through the hole in the cup. Wrap the stem clockwise to the second hook, then slip the stem into the hook on the cup. Insert the balloon into the slits on the cup. With the ribbon attached to the Bubbles™ balloon, insert into the slits on the cup. Wrap the ribbon in and out of the slits until secure.

Cut the cello into squares. Roll out 10" of cello and cut many strips. Cut these 10" strips into three. This will give you an 8" x 10" piece of cello. Gather the cello squares in the middle and dip into the glue pan. Keep your glue pan at a low setting so that the glue is thick. Glue the cello directly to the MaxiCup II™ balloon cup. It will take approximately fifteen pieces of cello to fill the cup.

Make a three-loop bow using the #9 citrus ribbon. Add a few ribbon tails using the citrus ribbon. Tie the bow with another piece of ribbon. Glue the bow to the bottom of the cello. Insert the balloon stick into the cup of the balloon. For added security, place a small amount of glue on the stick before inserting into the balloon cup.
